## PROJECT PORTFOLIO

---

### **FeedMe** | React, Node, MongoDB, Socket.io, JWT, Heroku, Netlify

Web application that allows users to post images and messages in realtime using Socket.io for live messaging updates. JWT middleware implemented for user authentication. React components reused in Feed and Post Show pages.

### **Stream Chat** | React, Ruby on Rails, MongoDB, StreamChatAPI, Netlify, Heroku

Full-stack project that allows users to 1:1 or group chat in realtime using the Stream API and React SDK. Stream API uses a proprietary key-value store in conjunction with Raft Consensus Algorithm and MongoDB to facilitate lightning-fast response times. Backend API hosted on Heroku with frontend hosted on Netlify.

### **GameOn** | Python, Flask, SQLAlchemy, React Native, Heroku

Full-stack project designed to connect users with local pick-up games and activities. Post new activities to the community event board or join events by reserving a spot in real-time. Google Location API is used for maps. Backend API developed using Python and Flask.

### **InkTank** | Ruby on Rails, JavaScript, Sinatra, PostgreSQL, OAuth, Heroku

Web application with UX focused on enhancing Tattoo Artists' marketability by connecting customers based on style, location, availability preferences. Google API for image, login, media data. Stripe API for taking card payments. GitHub OAuth is used for login authentication.

### **Sweater Weather** | Ruby on Rails, PostgreSQL, Heroku

Rails API built to help travelers better plan for the weather in a given location. Google Location API is consumed for destination location coordinates. DarkSky API is consumed for forecast data. Unsplash API is consumed for images.

### **Brownfield of Dreams** | Ruby on Rails, Redis, SendGrid, PostgreSQL, Heroku

An educational platform focused on displaying training videos based on tags and user interests. GitHub API is utilized for Authentication and YouTube API used for video display. SendGrid is implemented for email notifications and invites.
